# Assignment 4

## version 1.0

After completing this assignment, you will be able to

- explain the mechanism of some structures in a programming language.
- use Python to implement a code generation phase for a stack-based machine like JVM.
- create a complete compiler for JVM.

## 1 Specification

In this assignment, you are required to write a code generation checker for a program written in MC. The code generation will generate Jasmin code from AST created from assignment 2. The Jasmin code then is transferred to Java bytecode which must be run correctly in a Java Virtual Machine (JVM). To complete this assignment, you need to:

- read carefully the specification of MC language
- Download assignment4.zip and unzip it.
- Modify `main/mc/codegen/CodeGenerator.py` and `main/mc/codegen/Emitter.py` to implement this assignment.
- Modify `test/CodeGenSuite.py` to create 100 testcases to test your code.

## 2 Submissions

The operating system when checking your submission is Linux.

- The deadline will be announced on the class website.
- You must submit three files:
  - `CodeGenerator.py` and `Emitter.py` in Assignment 4 Submission
  - `CodeGenSuite.py` in CodeGenSuite Workshop

### 3 Plagiarism

- You must complete the assignment by yourself and do not let your work seen by someone else.
- You just submit your code in your allocated account.

If you violate any requirement, you will be punished by the university rule for plagiarism.
